Natural Gas (NG) Weekly MACD Trying to Positively Cross

Natural Gas (NG) gained more than 2% yesterday, breaking above downchannel resistance (on the 4hr chart) and downtrend resistance (on the daily chart). Significantly, NG has halted a near 2 week slide, and has all but formed a higher January low versus the December low. For bulls to get excited again, NG will have to close on a weekly basis above the weekly chart downchannel resistance. **Congratulations to Premium Members who benefited from the opportunities highlighted April 1st, April 17th and reiterated Aug 3rd before the day's historic gains.** The weekly and daily RSI and Stochastics are bottomish, rallying or consolidating recent gains. I am looking at entering long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Join the world's largest asset manager and 2 of the world's 5 largest (and 5 of the 10 largest) hedge funds by AUM as daily readers of Tradable Patterns' technical analysis. Silver (SI) Weekly/Daily/4hr

Silver (SI) is seeing some healthy profit-taking going into today's European morning, continuing a 5 week plus consolidation near the weekly chart downchannel resistance. Significantly, although odds remain decent for SI to retest the January high sometime in the next month or so, bulls should not rule out the roughly equal likelihood of SI turning down to the November low within the same period. [Congratulations to readers who heeded the warning August 5th of SI's overbought conditions](#) and to [the December 16th alert to SI's breakout above its daily chart downchannel resistance](#). Except for the weekly MACD which still slopes down, the weekly and daily RSI, Stochastics and MACD are bottomish or consolidating recent gains. I am long as of today at 25.4 although if I were flat, I'd look to enter long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

VIX (VX) Weekly/Daily/4hr

The VIX (VX) is firming going into today's European morning, trying to extend its rebound Monday from just above downchannel support (on the daily chart). Significantly, any daily close above the same downchannel's resistance following today's FOMC (at 2pm EST), will likely be followed in the days after by a retest of the December high and the 61.8% Fib retrace of the slide since early November. Regardless of any further profittaking in the day or so following the FOMC, a major bottom appears to be trying to form. **Congratulations to premium subscribers who benefited from the March 17th warning of the pending slide in the VX, one day before its record high on the front month contract and from the analysis June 9th highlighting the looming completion of the descending wedge. Premium subscribers were also alerted Aug 28th, Sep 2nd and Oct 20th of the growing probability of a rebound in the VIX.** The weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am long at 25.75 as of yesterday, although if I were flat, I'd look at entering long in the green zone (of the daily chart), targeting the red zone for Tuesday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Looking to get funded USD 100k-7 figures to prop trade? Feel free to write to info@tradablepatterns.com if you have a strong PnL track record and are looking for backing.

Understanding the negative correlation

One of the most traded asset correlations is between the U.S. dollar and gold -- a negative correlation that generally sees gold rise when the dollar falls and vice versa.

Bitcoin (BTC/USD) and the ICE USDX[®] have an evolving relationship. A historically strong positive correlation of these markets appears to have reversed: on January 15, the correlation was near its most negative level in the previous five years. Like a gold hedge, Bakkt[®] Bitcoin futures can be used as a hedge against the inflation of the dollar. ICE is the only place you can trade both physically settled bitcoin futures and USDX futures on the same platform.

Has the relationship between BTC/USD and the ICE USDX evolved to the point where this correlation will remain largely negative? The 5-year weekly correlation chart illustrates dips in 2017 and 2018 to similarly negative values, though these correlation values recovered within a year from their oversold levels to strongly positive figures near 0.8.

Weekly Correlation BTC Index vs. ICE USDX Index[®] (20 period)

For questions on accessing these markets, feel free to contact [Laura Edelman](mailto:sales@bakkt.com) (sales@bakkt.com).

Bitcoin (BTCUSD) Continues Consolidating Near 35k

The correlation between BTCUSD and the S&P500 has returned to historically high levels. Get the [latest Bitcoin biweekly commentary](#) (**published Jan 19**)

VIX (VX) RETESTING 50% FIB RETRACE OF MARCH SURGE

[A-] [A+]

VIX (CBOE VX SEP20) WEEKLY/DAILY/4HR

The VIX (VX) surged yesterday as part of its week plus bounce off downchannel support (on the daily chart), consolidating gains above downchannel resistance (on the 4hr chart). Significantly, the VX is suddenly retesting the 50% Fib retrace of the March surge, with the VX nearing downchannel resistance (on the daily chart). **Congratulations to premium readers who profited from the March 17th warning of the pending slide in the VX, one day before its record high on the front month contract** and from **the analysis June 9th highlighting the looming completion of the descending wedge**. Except for the weekly MACD which still slopes down, the weekly, daily and 4hr RSI, Stochastics and MACD are bottomish, rallying or consolidating recent gains. I am long as of today at 27.9, although if I were flat I'd look to go long in the green zone (of the daily chart), targeting the red zone for Monday. The amber/yellow zone is where I might place a stop if I was a swing trader (although in my personal account with which I seldom hold overnight I sometimes set my stops tighter).

Today's Top 3 Trades offers technical analysis on a subset of 3 CME/ICE commodity/index futures or spot FX markets (with coverage for 2 markets from a designated asset class(es) for each weekday as seen in the **Watchlist**), plus the top trade idea for the day from any asset class. All 3 markets covered are selected based on their likelihood to exhibit trend reversal or continuation during the week that begins on the day of coverage, based on technical analysis and news flow. For instance, Monday coverage is on 2 Agri (and potentially 1 Index), while Tuesdays are devoted to 2 Indices (and potentially 1 Soft).

Equities & ETFs has taken on a new format where it is now an Entries/Exits service inspired by technical analysis on a collection of equities and ETFs. The 25 equities and ETFs initially profiled for their beaten down, trend reversal potential, between April 17 to May 22, 2020, have mostly ran up tremendously since then, and are assumed to be closed trades as of June 10th using the day's opening price. Congratulations to all Premium Members who profited from these long equity/ETF ideas soon after they were initially profiled. I will look to explore new long/short trade ideas on Equities & ETFs with Premium Members with a target of 5 multi-week to multi-month swing trades each month. Premium Members also have access to monthly and weekly chart technical analysis for 5 Equity/ETF markets each Saturday.
