

## APPENDIX

### **Country, regional, and global estimates of maternal deaths, stillbirths, child (neonatal and 1-59-month-old) deaths that would be prevented by expanded coverage of community-based interventions provided by community health workers**

This appendix contains country, regional, and global estimates of the number of lives that could be saved by the implementation of evidence-based interventions by community-level providers outside of health facilities. Table 1 lists all the countries that were included in the analysis. Table 2 lists the interventions included in the analysis. Tables 3-7 provide estimates for each category of deaths (maternal deaths, stillbirths, neonatal deaths, and deaths of children aged 1-59-months). The estimated number of deaths for each population subgroup and the number of projected lives saved in 2020 given a level of  $x$  coverage (50%, 70%, and 90%) is provided and the mortality impact is presented as a calculated percentage. There are minor differences in these tables compared to the main pages due to rounding.

The column header is labeled as the “minimum” for population coverage because in countries where the current level of coverage for an intervention exceeds the designated target, coverage was not modeled to decline and the existing coverage level was entered into the model. Table 8 reports the total impact for all population subgroups combined.

## Contents

Table 1. Low-income high-burden countries (N=73) included in analysis .....	3
Table 2. Interventions that can be provided by community health workers with mortality impact estimated using the Lives Saved Tool (LiST) .....	4
Table 3. Estimates of numbers and percentages of maternal deaths that would be saved by expanded coverage of community-based interventions, by country and WHO region.....	6
Table 4. Estimates of numbers and percentages of stillbirths that would be averted by expanded coverage of community-based interventions, by country and WHO region.....	10
Table 5. Estimates of numbers and percentages of neonatal deaths that would be saved by expanded coverage of community-based interventions, by country and WHO region.....	14
Table 6. Estimates of numbers and percentages of child (1-59 months) deaths that would be saved by expanded coverage of community-based interventions, by country and WHO region.....	18
Table 7. Estimates of numbers and percentages of deaths of all under-five children (0-59 months) that would be saved by expanded coverage of community-based interventions, by country and WHO region .....	22
Table 8. Estimates of numbers and percentages of ALL deaths (maternal, child and stillbirths combined) that would be averted by expanded coverage of community-based interventions, by country and WHO region .....	26
